

GOOD SECURE CONTENT SUITE

THE CHALLENGE

How do you ensure the security of your apps and content and ensure regulatory compliance in the new boundaryless IT environment? How do you thrive in a world of mobile devices, mobile apps and cloud services without compromising the business? How do you maintain control over your files when they are shared outside of the firewall?

THE SOLUTION

The firewall is no longer the edge of the business. Increasingly organizations are using mobility to be more responsive, collaborate more effectively and reengineer key business processes. At the same time, cloud services are changing the way enterprises need to manage and control their enterprise files. The Good Secure Content Suite provides a complete and integrated platform for managing devices, apps, content and files in a world of pervasive mobility and cloud services.

MOBILIZE KEY APPS TO ENABLE BUSINESS TRANSFORMATION

With the Good Secure Content Suite, organizations can rapidly mobilize their key business apps including both collaboration apps, line of business (LOB) apps and even custom apps. It provides a platform to speed app development and deployment and enable effective management of apps and content. With the Good Secure Content Suite organizations can:

- Enable effective document collaboration with WatchDox secure Enterprise File Synchronization and Sharing (EFSS)
- Enable secure, third-party access to existing enterprise content repositories including SharePoint, SharePoint Online and Windows File Share
- Improve collaboration with mobile email, One Drive and SharePoint access, instant messaging and secure browsing
- Empower the extended work force to effectively collaborate on Office, PDF and image files, using integrated tools for creating, editing and annotating
- Quickly build apps using common development framework such as Adobe Phonegap, IBM Worklight and Xamarin
- Rapidly integrate new mobile apps with existing apps and business systems
- Reduce friction by empower app owners, app developers and IT to focus on what they each do best

ENSURE SECURITY AND COMPLIANCE

With the Good Secure Content Suite, organizations can adopt mobile and cloud technologies with confidence. It offers a layered security solution that protects at every level: apps, data, devices and content while providing the intelligence organizations need to ensure regulatory compliance. With the Good Secure Content Suite organizations can:

- Integrate Digital Rights Management (DRM) protection at a file level so content stays secure everywhere it goes
- Control ability to access, view, edit, copy, print or forward files, even after files are downloaded or shared with third parties
- Protect against enterprise data leakage while in use, at rest or in transit with policy-based app controls
- Track all document activities and provide critical information for audit, compliance and business intelligence
- Maintain security and reduce IT costs with VPN-less access that requires no inbound ports
- Ensure security even when IT does not control device or storage, including for business partners, contractors and consultants
